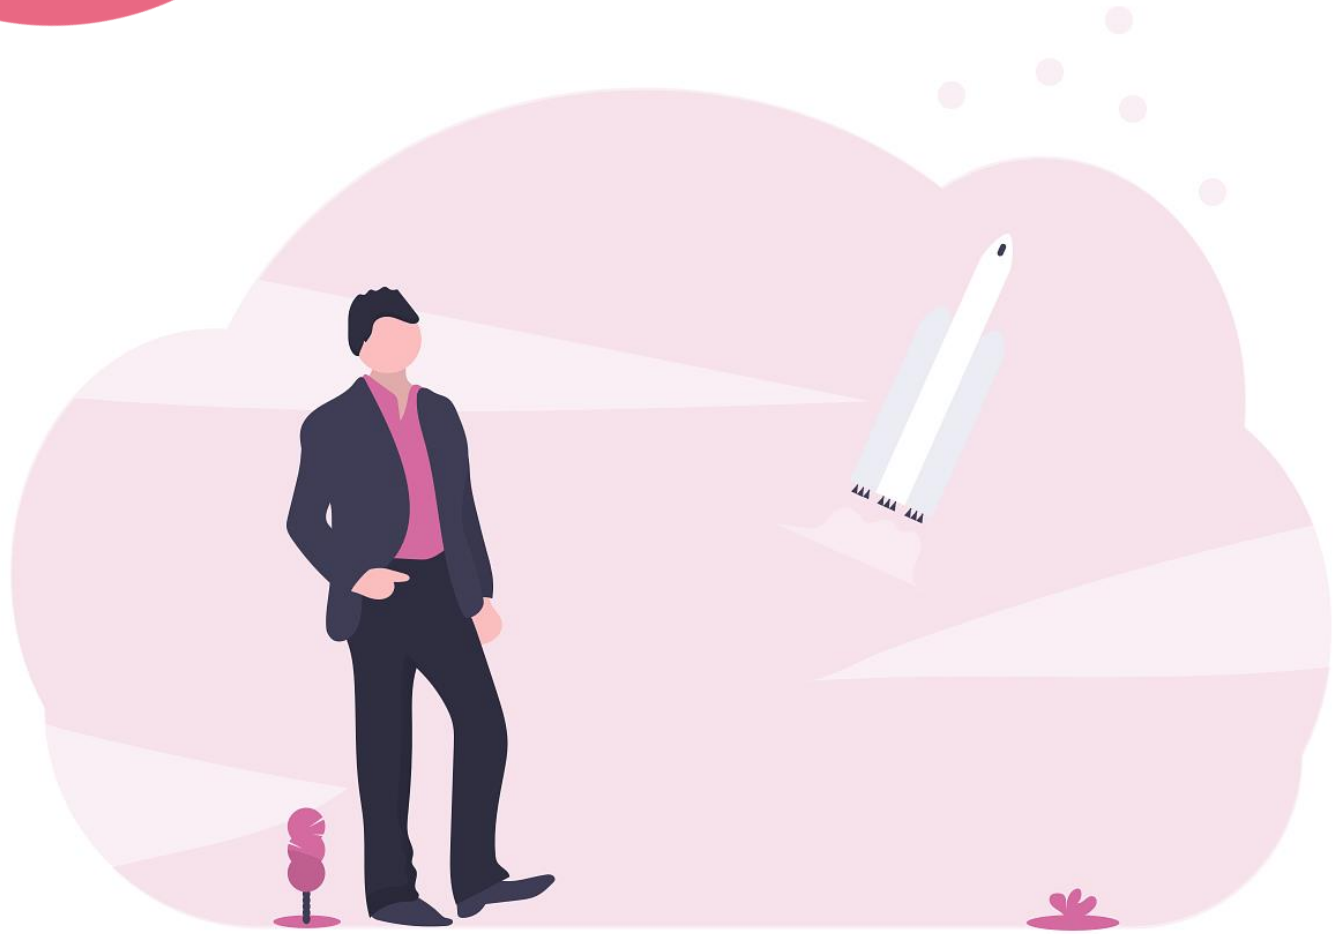
LuncherBox

Placing orders has never been faster.



Project by Delirium Products!
deliriumproducts.me

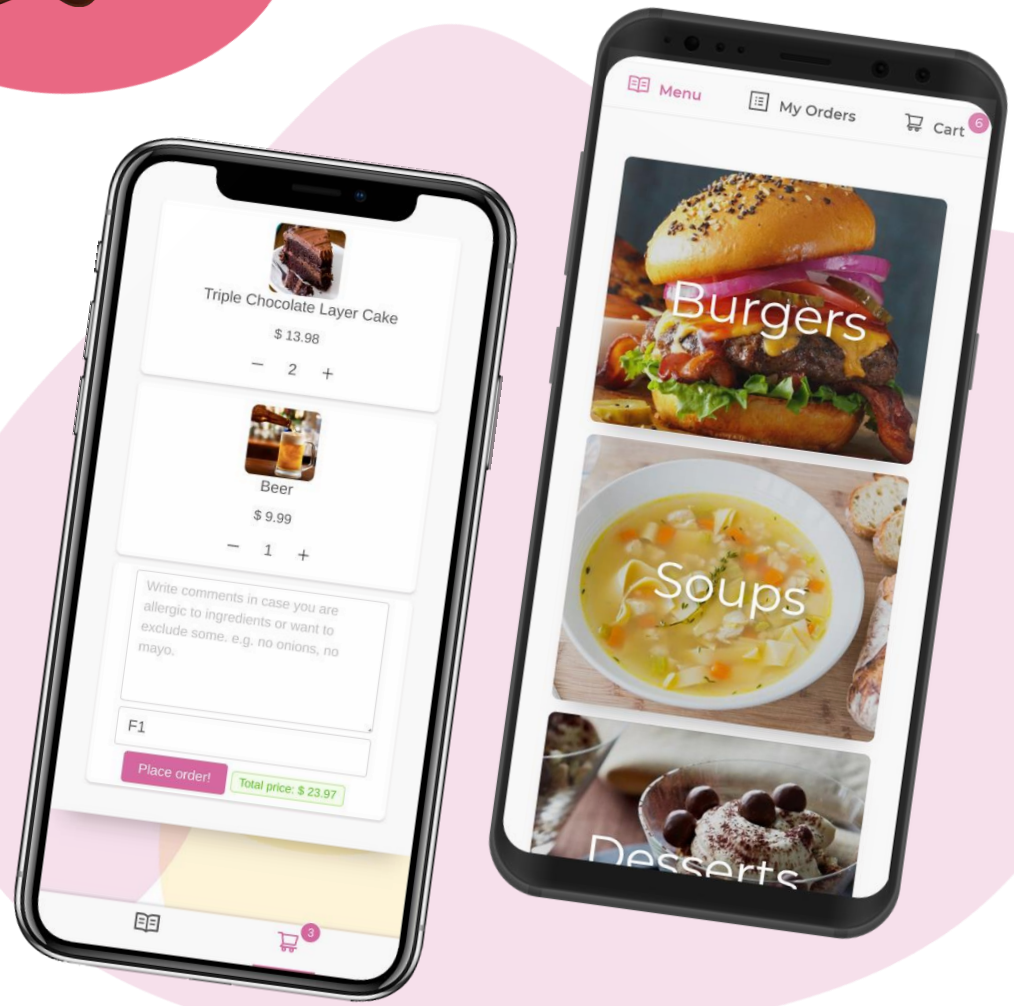
The problem

- Waiting too long just to have your order taken

- Waiting too long for customers to choose their food

- High turnover for waiters

The solution



- Subscription based platform

- Fast, responsive and beautiful web app

- No registrations required

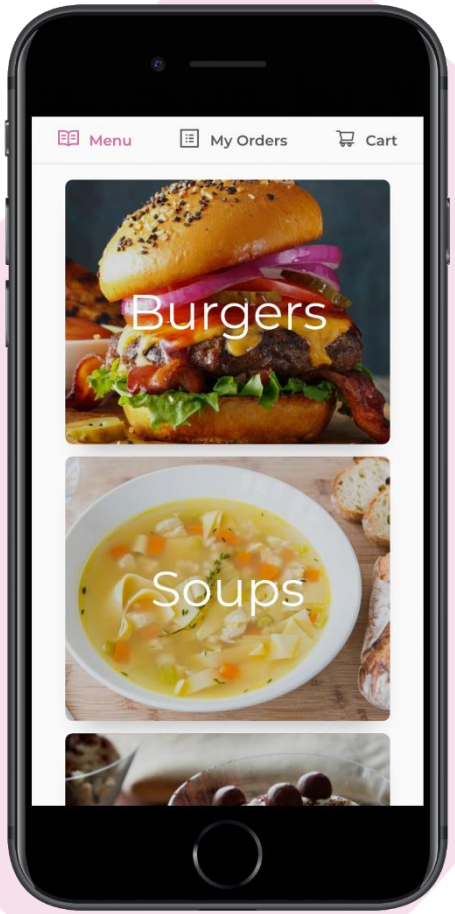
- Use on any device

Features

Easy to use interface
Navigate through the menu with ease!

Admin panel
Easily create, edit and delete products, ditch the paper menu!

Order status
Check your order status in real time!

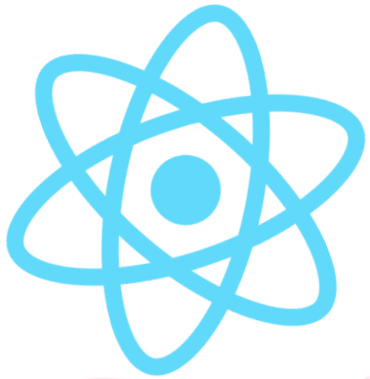


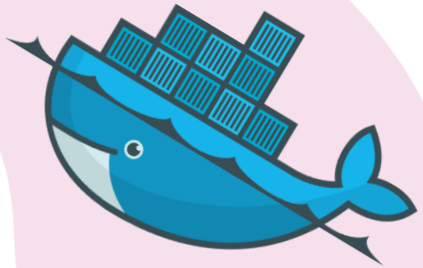
Fully web based
No need to download, just open in your browser and use it on any device!

Instruct the chefs
Provide special instructions to the chefs about your order!

PWA
Built with the latest and greatest technologies, providing you with a blazing fast experience!

Technology Stack





Architecture

Restaurant 1

Restaurant 2

Restaurant 3

K8s Master Node

Demo

Business model - B2B

- Owners will pay a monthly fee to use the service

- They will get a fully customized restaurant menu and admin panel

- No hardware required

Pricing plans

$ 39.99
per month

For small restaurants

✓ Up to 50 people

$ 59.99
per month

For medium restaurants

✓ Up to 100 people

$ 149.99
per month

For large restaurants

✓ Up to 200 people

Roadmap

Q4 2018

Research

Q1 2019

MVP

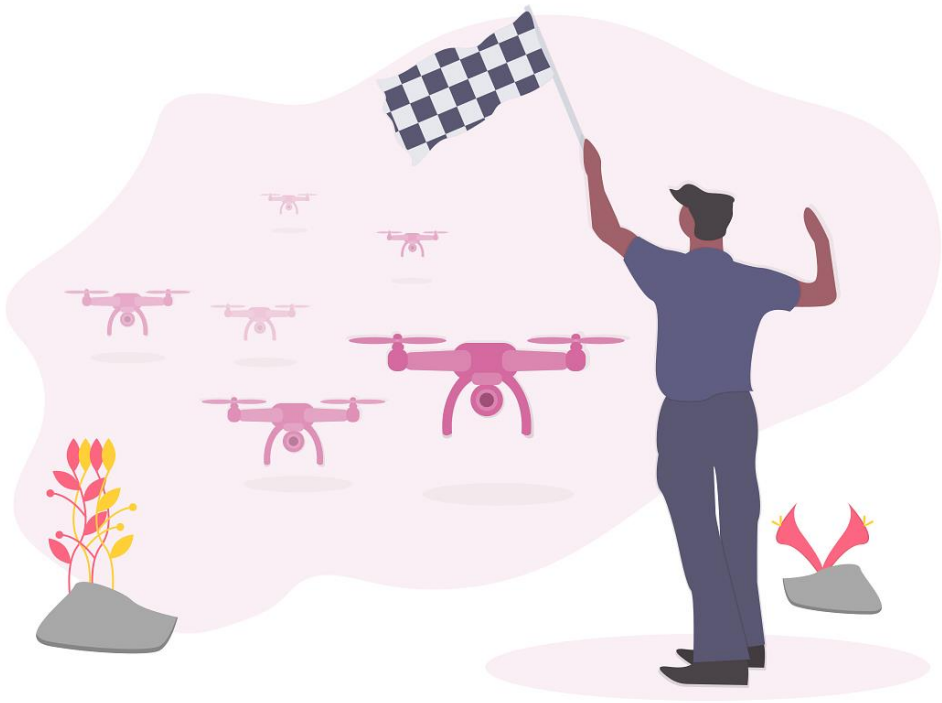
Q2 2019

Beta

Q3 2019

Pilot

Competition



- We don’t require any specific hardware

- Use on any device

- No need to download

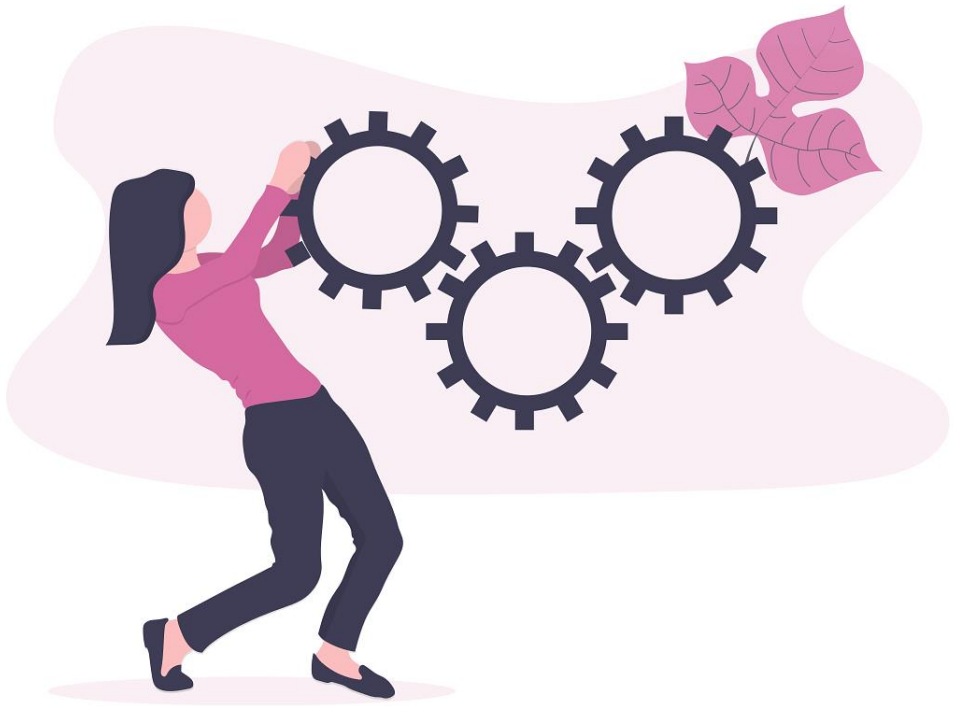
- Cheaper

- Better UI

What we learned

- Typescript
- CSS-in-JS
- Less
- Webpack
- Babel
- CSS Flexbox
- Advanced React Patterns
- React SSR / Next.js
- Input validation
- Realtime connection
- PWAs
- Authentication
- Docker
- Writing docs
- LaTeX
- A basic understanding of Serverless & GraphQL
- Git workflow
- Kanban Board
- Agile-like methodology
- Linux
- OOP
- Deployment
- Express.js
- Passport.js
- TypeORM
- Jest / Testing
- Rate limiting
- Writing API docs
- Redis
- MySQL
- Caching
- Sessions
- Error handling
- Decorators

Conclusion and future



- Implement more features, such as payment

- Integrate the app in existing restaurants

- Improve based on the feedback from them

- Implement i18n
